DETAILED ACTION

This Office Action is in response to communications filed on 06/24/2010

Allowable Subject Matter

Claims 1-15 are allowed.

The following is an examiner's statement of reasons for allowance: the cited prior arts on record, alone or in combination, do not teach or fairly suggest the invention as claimed in **Claim 1**, a method of performing configuration of a subsystem that includes multiple registers, the subsystem comprising: a configuration/control unit and multiple sets of configuration data, and each of the sets of configuration data defining a respective one of the multiple configurations; and the configuration/control unit, in response to a single register write that identifies one of the sets of configuration data, encapsulating the multiple registers by performing configuration of the subsystem, including storing the configuration parameters of the identified set in the multiple registers of the subsystem.

As to **claim 6**, the cited prior arts on record, alone or in combination, do not teach or fairly suggest a subsystem having self-configuration capabilities, comprising: multiple registers

that define multiple configurations of the subsystem; a configuration/control unit; and multiple sets of configuration data, each of the sets of configuration data defining a respective one of the multiple configurations; wherein the configuration/control unit is configured, responsive to a single register write that identifies one of the sets of configuration data, to encapsulate the multiple registers by performing configuration or control of the subsystem..

As to **claim 11**, the cited prior arts on record, alone or in combination, do not teach or fairly suggest a method of configuring a subsystem, in a system that includes a processor coupled to a hardware subsystem via a system bus, a configuration/control unit and a plurality of registers that define multiple configurations of the subsystem, the method comprising: storing a plurality of sets of configuration data in a configuration/control unit, each of the sets of configuration data including configuration parameters for each of plurality of registers, and each of the sets of configuration data defining a respective one of the multiple configurations; and responsive to the configuration/control unit receiving a single register write that identifies one of the sets of configuration data, encapsulating the plurality of registers by writing the

configuration parameters of the identified set to the plurality of registers.

Furthermore, the combination of the limitations set forth above with all the limitations in claims 1, 6 and 11 are not obvious. In addition, Applicant's Arguments filed on 06/24/2010 are persuasive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
